DRUG LIST PRODUCT DESCRIPTIONS

To assist in understanding which specific strengths and dosage forms are on the **FamilyCare, Inc. Medicaid Formulary**, examples are noted below. The general principles shown in the examples can usually be extended to other entries within the document. Any exceptions are noted.

Products on the FamilyCare, Inc. Medicaid Formulary include all strengths and dosage forms of the cited brand-name product.

ondansetron

Zofran

Oral tablets, oral disintegrating tablets, solution and all strengths of Zofran would be included in this listing.

When a strength or dosage form is specified, only the specified strength and dosage form is on the FamilyCare, Inc. Medicaid Formulary. Other strengths/dosage forms of the reference product are not.

rivastigmine transdermal

Exelon Patch

The transdermal patch dosage form of Exelon is on the document. From this entry, the oral tablet cannot be assumed to be on the list unless there is a separate entry.

If the OTC and Prescription versions of the product are covered, then both are listed.

OTC *naproxen sodium*

Aleve

naproxen sodium

Anaprox

Extended-release and delayed-release products require their own entry.

metformin

Glucophage

The immediate-release product listing of Glucophage alone would not include the extended-release product Glucophage XR.

metformin ext-rel

Glucophage XR

A separate entry for Glucophage XR confirms that the extended-release product is on the **FamilyCare, Inc. Medicaid Formulary**.

Dosage forms on the FamilyCare, Inc. Medicaid Formulary will be consistent with the category and use where listed.

neomycin/polymyxin B/hydrocortisone

Cortisporin

Since Cortisporin is listed only in the OTIC section, it is limited to the otic solution and suspension. From this entry the topical cream cannot be assumed to be on the list unless there is an entry for this product in the DERMATOLOGY section of the **FamilyCare, Inc. Medicaid Formulary**.

GENERIC SUBSTITUTION

Generic substitution is a pharmacy action whereby a generic version is dispensed rather than a prescribed brand-name product. **Boldface** type indicates generic availability. However, not all strengths or dosage forms of the generic name in boldface type may be generically available. In addition, boldface type may indicate that the brand name cited is a generic (ex. Levoxyli).

FamilyCare, Inc. has a mandatory generic pharmacy benefit. If a medication is available as generic, then the generic product must be dispensed. Generic drugs are usually priced lower than their brand-name equivalents. Prescription generic drugs are:

- Approved by the U.S. Food and Drug Administration for safety and effectiveness, and are manufactured under the same strict standards that apply to brand-name drugs.
- Tested in humans to assure the generic is absorbed into the bloodstream in a similar rate and extent compared to the brand-name drug. Generics may be different from the brand in size, color and inactive ingredients, but this does not alter their effectiveness or ability to be absorbed just like the brand-name drug.
- Manufactured in the same strength and dosage form as the brand-name drugs.

When a generic drug is substituted for a brand-name drug, you can expect the generic to produce the same clinical effect and safety profile as the brand-name drug.
